

Experiencing Learning, Attention, or Behaviour Difficulties?

FREE INFORMATION EVENING

ADHD Aspergers Autism

Up-to-date diagnostic and treatment options for
problems with learning, attention, and behaviour.

Latest scientific studies show that certain treatment methods can help to dramatically reduce the symptoms of ADHD and manage the underlying causes more effectively. Solstice-Mind Matters has acquired sophisticated tools for precise identification and treatment of the individual brain functioning.

Solstice-Mind Matters is currently contributing to international research into the efficacy of one such treatment. This study will investigate the efficacy of neurofeedback (NF) on electroencephalographic (EEG) brain function, cognitive performance, clinical symptomatology and behavior in 500 ADHD subjects. Our centre is looking for eligible participants to be involved in this study.

Date: COMING SOON!

**Venue: Solstice-Mind Matters 36 Beryl Street
Tweed Heads NSW**

Time: 6:15 to 8:30pm
